Did You Know?

Stereo Zone-Outputs on a CX-163 zone mixer can be switched to mono outputs via an internal jumper? This allows each mono output to mirror the other and for the level of each output to be controlled independantly via RL-1 remote control plates, effectively converting a single stereo zone output into two mirrored mono Zone outputs.

PARK LIVE - Running with VTX-WM1

Park Live in the Olympic Park, London - sponsored by British Airways, was created to provide the ultimate viewing experience for visitors to the Olympic Park for the London 2012 Olympic Games and Paralympics.

Two enormous screens mounted back-to-back and floating on a gigantic platform / stage on the River Lea face out to acres of parkland areas on either side.

Cloud VTX-4400 4-channel 400W amplifiers are used to drive nearly 100 SoundTube XT850i-GN in-ground loudspeakers using Cloud [CXL-400T 100V transformers](#) for the VTX amplifiers to provide nearly 16,000 Watts of amplification across the parklands.

Cloud VTX-WM1 web monitor cards installed in each of the VTX-4400 amplifiers allow contractors for Park Live to monitor the performance of the amplifiers for the duration of the games, from anywhere in the world with a web enabled device.

Increased production for Summer Months

During the summer months, traditionally a quieter period for manufacturing, you may be pleased to hear that production of key models from Cloud Electronics has increased.

Sales demand for popular models including the Cloud Z4 and Z8 MKII Zone Mixers, CXV-425 and CXV-225 100V Line Amplifiers, has outstripped growth forecasts and in recent weeks / months there has been an unprecedented high demand for these significant models.

We hope increased production of key models during the Summer months will lead to improved availability in the months ahead.

Thank you for your continued support and use of Cloud Electronics products.
