Did you know?

Zone-Mixers differ to normal mixers because they take a number of source inputs and can send a different source input to each output, allowing for different zones of sound.

With *Cloud zone-mixers* it is possible for users to select an independent source for each zone rather than having the same mixed output across all zones.

Selectable zone outputs provides complete flexibility with system design as it allows different zones in a project to share the same source selection or have completely independent source selection and volume control for each zone.

Cloud zone-mixers also provide independent paging across all zones as well as providing a page-all function when using a multi-zone paging microphone.

CGA Choose Cloud VTX Amplifiers for Ghana

The Santoku Restaurant is a modern Japanese restaurant bringing sophisticated quality dining to a growing international client base living in and visiting Accra, Ghana.

CGA Integration Consultancy in Bracknell, Berkshire, a specialist consultancy in sound, light and video systems were engaged to design, supply and install a complete audio system for the Santoku Restaurant.

A multi-zone audio system was designed and installed across the restaurant, bar, lounge, terrace, washroom and private dining areas. A Cloud DCM-1 Digitally Controlled Zone-mixer linked to several four-channel Cloud VTX-series amplifiers in turn connected to ceiling loudspeakers, allowed for even coverage of sound across all of the different zones. Cloud Electronics Opens US Office

Cloud Electronics was delighted to announce at last month's Infocomm 2012 in Las Vegas the appointment of Wesley Garrett in the role of General Manager for Cloud USA's newly opened office in Park City, Utah.

Since the announcement Wes has been busy appointing manufacturer reps to the sales force, finalising the sales program and preparing US pricelists and catalogues.

The US warehouse has been crammed full of US-ready stock of Cloud Electronics' products and stock is now available for shipping directly within the US, directly from the US warehouse.
